How to run the code

SYSTEM REQUIREMENTS:

- **Java version used:** Java 25 (any version above 25 works!)
- Maven installed and configured in system PATH.
- JavaFX SDK 25.0.2 installed.
- We are using Windows & Mac in development.

HOW TO RUN THE GAME:

- Open CMD (Command Prompt)
- Navigate to your project root.
- The jar file is called quax_release
- Run the following command:

General command:
java --module-path "PATH_TO_JAVAFX_LIB" --add-modules MODULES_USED -jar PATH_TO_YOUR_JAR

(note: the modules used can be copied from my example (javafx.controls,javafx.fxml,javafx.media,javafx.web,javafx.swing)

Command that works for me:
java --module-path "C:\Users\sanid\Downloads\openjfx-25.0.2_windows-x64_bin-sdk (1)\javafx-sdk-25.0.2\lib" --add-modules javafx.controls,javafx.fxml,javafx.media,javafx.web,javafx.swing -jar quax_release.jar

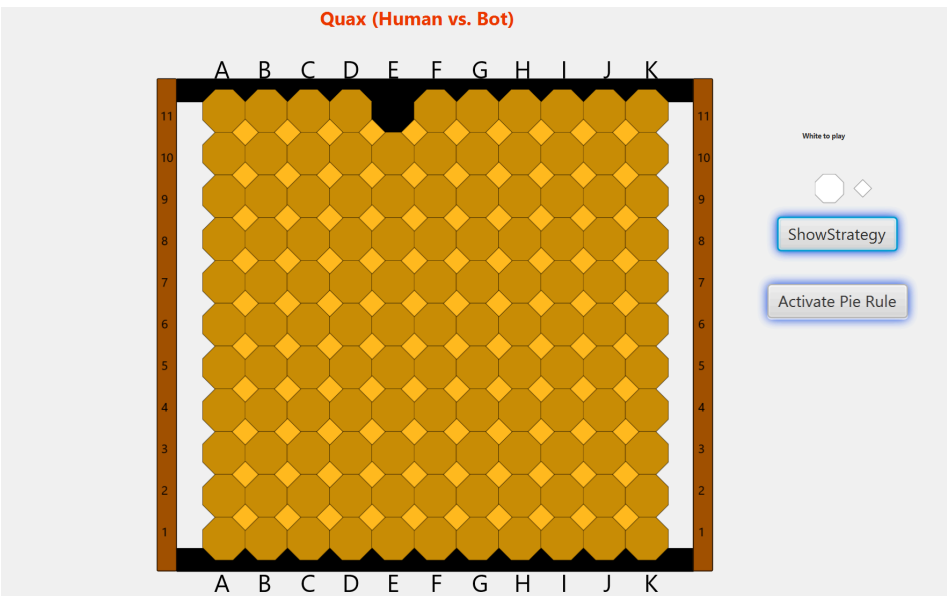
WHERE TO FIND JAR FILE:

The jar file is in the main folder:

.git		04/05/2026 20:44	File folder	
.idea		04/05/2026 20:40	File folder	
.mvn		17/02/2026 10:22	File folder	
src		20/02/2026 16:21	File folder	
target		04/05/2026 20:43	File folder	
.gitignore		17/02/2026 09:51	Git Ignore Source ...	1 KB
dependency-reduced-pom		04/05/2026 18:37	Microsoft Edge HT...	4 KB
Final_Roadmap		04/05/2026 20:02	Microsoft Edge PD...	66 KB
mvnw		17/02/2026 09:51	File	11 KB
mvnw		17/02/2026 09:51	Windows Comma...	7 KB
pom		04/05/2026 18:44	Microsoft Edge HT...	5 KB
quax_release		04/05/2026 20:43	Executable Jar File	35 KB

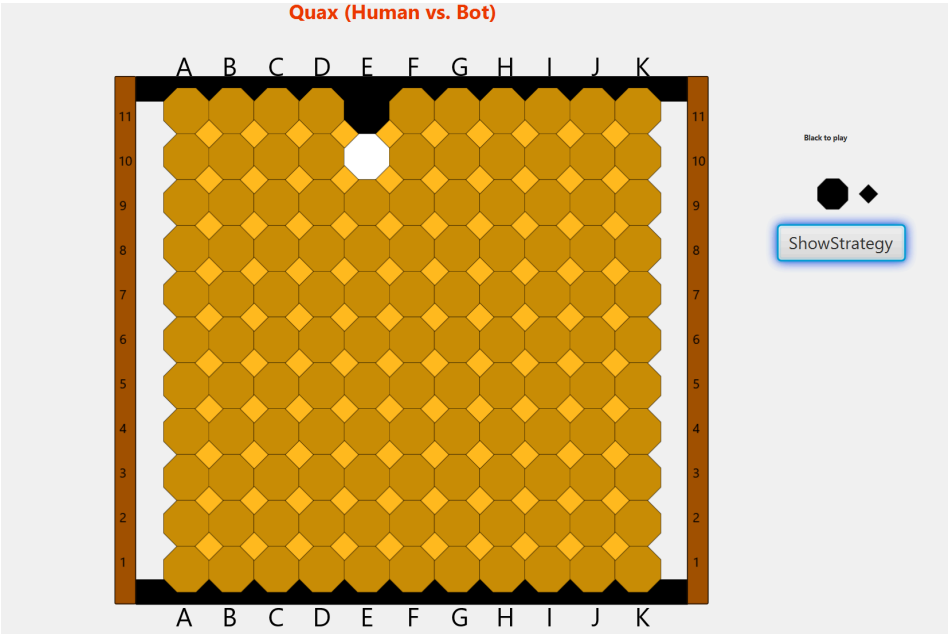
HOW TO PLAY THE GAME:

Once you run the command, the game should start in full screen:



Black moves first. You can click any tile.

The first round starts with White being the bot. Every round this alternates. So after playing a full game, bot switches to Black being the bot.



In the first round, human is Black. Make your move.

Wait a couple of seconds while Bot (WHITE) makes its move.

The bot will decide to press the pie button if needed (see implementation details).

Continue playing until the game ends (I wasn't able to beat the bot, but I'm sure it can be beaten!).
